Appendix VI - Fact Sheets

## I. GEOGRAPHIC DESCRIPTION

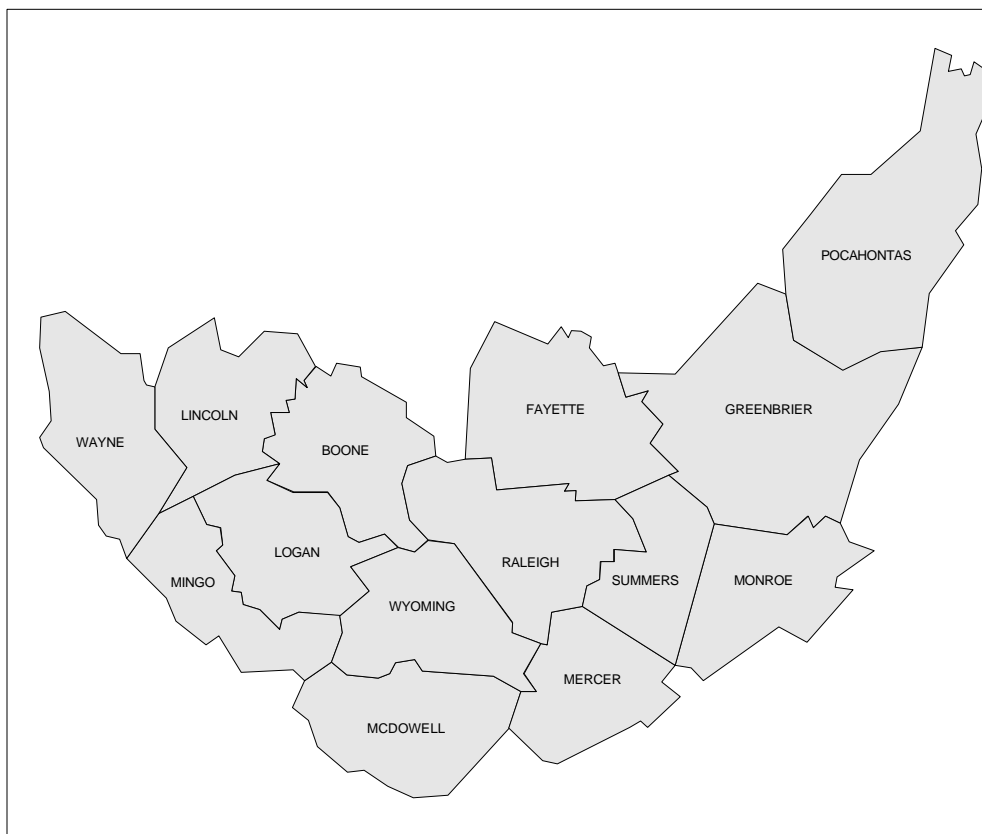

### A. Geographic Boundaries

The Southwest Virginia / West Virginia Sub Area encompasses twelve counties in West Virginia and twenty-three counties in western Virginia which comprise the Southwest VA/WV Sub-Area (Region III). The counties included in the West Virginia portion of the sub-area plan are as follows:

WV:	Boone	Lincoln	Mercer	Pocahontas
	Fayette	Logan	Mingo	Summers
	Greenbrier	McDowell	Monroe	Wyoming

West Virginia's portion of the sub-area is located in the figure below.

#### WEST VIRGINIA COUNTIES IN THIS SUB-AREA

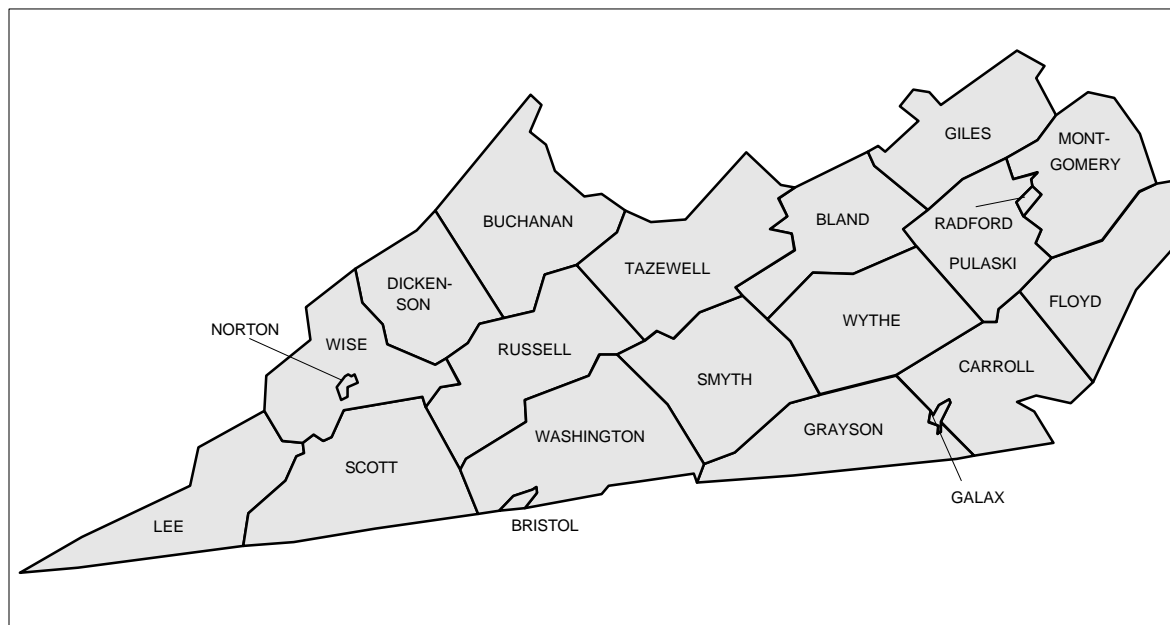

The counties included in the Virginia portion of the sub-area plan are as follows:

VA:	Bland	Dickenson	Montgomery	Scott
	Bristol	Floyd	Norton	Smyth
	Buchanan	Galax	Pulaski	Tazewell
	Carroll	Giles	Radford	Washington
	Christiansburg (Town of)	Grayson	Raleigh	Wise, and Wythe
		Lee	Russell	

Virginia's portion of the sub-area is located in the figure below.

VIRGINIA COUNTIES IN THIS SUB-AREA-

#### Sub-Area Response Planning Notice:

The Sub-Area committee is chaired by Bob Kelly, U.S. Environmental Protection Agency (EPA) On Scene Coordinator (OSC), who is responsible for developing the Sub-Area response plan. Those interested in participating on the Sub-Area committee or commenting on the Sub-Area response plan should contact the Sub-Area committee chair at (215) 814-3268.

Bob Kelly, OSC (3HW31)  
US Environmental Protection Agency  
1650 Arch Street  
Philadelphia, PA 19103-2029

## B. Area of Responsibility

Each county within the jurisdiction of this plan has its own Office of Emergency Services (OES) which is in charge of spills of oil and hazardous substances. In general, each OES has an Emergency Operations Center which will serve as a hub for coordination and communication activities. In general, the local fire chief, in conjunction with the OES, will be in charge of minor spills. Spills of greater significance will be handled in accordance with the National Contingency Plan (NCP) and Area Contingency Plan (ACP).

## C. Area Spill History

The EPA maintains an Emergency Response Notification System (ERNS) to track discharges or releases of oil and hazardous materials. Information on specific incidents for the Southwest, VA/WV sub-area can be obtained by contacting the Region III Regional Response Center at (215) 814-9016 (24-hour hotline).

All counties in this sub-area have pre-planning measures in place for spills of oil and hazardous substances. Generally, one of two computer programs is utilized to assist in this planning. Both are used to perform hazard/risk assessments based on SARA Title III reporting information, transportation routes, sensitive populations, spill history, etc. One system used is the Emergency Information System (EIS) which operates on IBM-based computer systems, and the other system is the Computer-Aided Management for Emergency Operations (CAMEO), which originally operated on the Apple Mac system, but now also operates on PC-Windows. The county planning tools are as follows:

COUNTY	STATE	CAMEO	EIS	OTHER (NAME)
BOONE	WV			
FAYETTE	WV			
GREENBRIAR	WV			
LINCOLN	WV			
LOGAN	WV			
MCDOWELL	WV			
MERCER	WV			
MINGO	WV			
MONROE	WV			
POCAHONTAS	WV			
SUMMERS	WV			
WYOMING	WV			

COUNTY	STATE	CAMEO	EIS	OTHER (NAME)
BLAND	VA			
BRISTOL	VA			
BUCHANON	VA			
CARROLL	VA			
CHRISTIANSBURG	VA			(town of)
DICKENSON	VA			
FLOYD	VA			

COUNTY	STATE	CAMEO	EIS	OTHER (NAME)
GALAX	VA			
GILES	VA			
GRAYSON	VA			
LEE	VA			
MONTGOMERY	VA			
NORTON	VA			
PULASKI	VA			
RADFORD	VA			
RALEIGH	VA			
RUSSELL	VA			
SCOTT	VA			
SMYTH	VA			
TAZEWELL	VA			
WASHINGTON	VA			
WISE	VA			
WYTHE	VA			

#### D. Sensitive Areas

Sensitive areas are divided into areas of special economic and environmental importance. Economical sensitive areas include water dependent recreational areas, commercial areas, and anthropological areas. Environmental sensitive areas include habitats, land management areas, and biological resource areas.

Sensitive areas located in this area have been identified by a variety of resources, including, but not limited to the table in Appendix II

#### E. Facility Response Plans

Facility response plans (FRPs) are required by owners or operators of “significant and substantial or substantial harm facilities.” The risk-based factors for significant and substantial or substantial harm facilities are found in 40 CFR part 112 section 112.20(f). The table in Appendix III lists the facilities located in each county along with information about their facility response plans (FRPs). Facilities with “no approval required” do not meet the significant and substantial or substantial harm risk-based factors.

## II. ORGANIZATIONAL FRAMEWORK

### A. Response Systems & Policies

#### 1. County EMA Response Teams

In most cases in this area, the first response to a spill of oil or hazardous substance will be handled by the jurisdictional fire department. If the spill is determined to be a hazardous substance or oil in excess of 200 gallons, the hazardous materials team (Haz-Mat Team) may be called. Some counties in this sub-area have a state certified Haz-

Mat Team. Others contract out to private certified Haz-Mat Teams. The following table lists the Haz-Mat Team capability of each county:

*(This information will be provided by Jack Tolbert and Bob Clark.)*

## 2. State

### **Commonwealth of Virginia**

- a. Virginia Department of Environmental Quality (VADEQ)
- b. Virginia Emergency Management Agency (VDES)

### **West Virginia**

- a. West Virginia Department of Environmental Protection (WVDEP)
- b. West Virginia Office of Emergency Services (WVOES)

## 3. Federal

- a. EPA

The Environmental Protection Agency (EPA) is the primary lead agency responsible for response to oil and hazardous substances in the inland area. Since this sub-area is not a coastal area, EPA would be the lead federal agency at a spill response. EPA responds to calls made to the National Response Center or by direct contact to the Regional Response Center. A federal On-Scene Coordinator (OSC) will be dispatched to the scene. For planning purposes, the EPA contact for this sub-area is Bob Kelly (215) 814-3268.

### 1) SATA

Since the OSC does not carry the response and monitoring equipment necessary for spill response, the OSC will likely task the Site Assessment/Technical Assistance (SATA) team to respond. SATA is a contractor to EPA who has monitoring and sampling equipment available and a limited amount of containment equipment.

- b. USCG

The United States Coast Guard (USCG) is the primary lead agency responsible for spills on navigable waters for this sub-area. USCG assistance will primarily be provided by the Atlantic Strike Team, which can be contacted at either (609)

724-0008 or through the National Response Center. There are no USCG pre-designated OSCs for this sub-area.

#### 4. Incident Command System

The Incident Command System (ICS) provides the organizational structure for responding to oil spills and hazardous substance emergencies. The ICS enables integrated communication and planning by establishing a manageable span of control. The ICS divides an emergency response into five manageable functions: Command, Operations, Planning, Logistics, and Finance.

All agencies in this plan agree to utilize the incident command structure set up at the scene by the Incident Commander (IC).

The five manageable functions are essential for successful response operations. The command structure is led by a single incident commander (supported by a command staff), who directs the efforts and receives input from the our supporting areas. In this sub-area, the incident commander is the senior jurisdictional fire officer at the scene. The ICS is first implemented at the local level by first responders (fire, police, emergency management agencies). An ICS may be expanded to include a Unified Command (UC) for complex responses that often require multi-agency resources on the federal, state, and local levels.

In responses involving responders from a single jurisdiction, the ICS establishes a format for comprehensive response management. When an incident involves more than one agency or jurisdiction, however, the ICS framework of a single-jurisdiction incident command allows expansion to a multi-jurisdictional response. The modular organization of the ICS allows responders to scale their efforts to the needs of the incident.

#### 5. Unified Command (UC)

The UC is an expanded accommodating structure of the ICS that ensures that responsibilities are defined, efforts and resources are combined, and maximum efficiency is achieved within a cooperative environment.

The functions of a unified command are to:

- provide overall response direction,
- coordinate effective communication, and
- coordinate resources.

As a component of an ICS, the Unified Command provides the organizational management tool to coordinate the effective involvement of the various agencies. It creates the link between the organizations responding to the incident. The ICS brings together the “incident commanders” of all major organizations involved in the response.

An ICS led by a Unified Command (hereafter referred to as an ICS/UC) is the most effective system to manage federal, state, and local responses to complex multi-agency, multi-jurisdictional incidents. This mechanism is necessary to effectively utilize the resources of the parties responsible for the release/discharge, the federal agencies in the NRT/RRT structure, and the affected state(s) and local governments.

According to the NCP, the area contingency planning process is the forum for working out the details of how the ICS will be applied. The ICS led by a UC and key terms therefore need to be listed and defined in the Area Contingency Plan (ACP). The operating partners are the incident commander, local government, state representatives, the federal On-Scene Coordinator, natural resource trustees, and the responsible party. The responsible party is expected to conduct the response under the oversight and/or direction of the FOSC with the participation of state and local representatives. The response must be conducted in accordance with the NCP, the appropriate ACP, and the facility/vessel response plan.

In addition, when developing an ICS/UC, it is important to recognize that the key players in the response management system maintain a separate internal management infrastructure during a response; they do not relinquish agency authority, responsibility, or accountability.

#### 6. Mutual Aid Agreements

(Under development)

#### B. Response Organizational Framework

(Under development)

### III. NOTIFICATION AND CONTACT LISTS

The following are contacts and telephone numbers for federal, state, and local notification.

#### A. Statutory Notifications

National Response Center	(800) 424-8802
--------------------------	----------------

Regional Response Center	(215) 814-9016
--------------------------	----------------

WVDEP (800) 642-3074

VADEQ (800) 642-3074

#### B. Local Emergency Contacts

VADEQ  
Southwest Region  
(540) 676-4800

VADEQ  
West Central Region  
(540) 562-6700

Notification of an oil or hazardous material incident is required by Title III, U. S. Code, and may be made at any time by a carrier, shipper, manufacturer, or private citizen who has observed an accident or incident. A 24-hour telephone number to which reports of oil or hazardous materials incidents can be made to proper governmental officials is essential.

The primary 24-hour reporting numbers to be used throughout the state of Virginia are:

1-800-468-8892 Virginia Emergency Operations Center (VAEOC)  
1-804-674-2400 (VAEOC)

#### C. Support Agency Contacts

##### **Department of Health & Human Services**

Agency for Toxic Substances and Disease Registry (ATSDR)  
24-hour (404) 639-0615

##### **Chemical Transportation Emergency Center (CHEMTREC)**

24-hour (800) 424-9300

##### **Department of the Interior (DOI)**

Office of Environmental Affairs  
Mr. Donald Henne (215) 597-5378

U.S. Fish & Wildlife Service  
Ms. Dolores Savignano (413) 253-8613

##### **Department of Commerce**

NOAA Coastal Resource Coordinator  
Mr. Peter Knight (215) 597-3636

NOAA Hazmat Liaison  
CDR Gerald E. Wheaton (202) 267-6120

NOAA Scientific Support Coordinators  
24-hour (206) 526-6317

**Federal Emergency Management Agency (FEMA)**  
(215) 931-5578

**Tri-State Bird Rescue & Research, Inc.**  
Eileen Muller 24-hour (302) 737-7241

#### IV. RESPONSE RESOURCE CAPABILITIES

##### A. Haz-Mat Teams

The roles and responsibilities of the Haz-Mat Teams are discussed in Section II A of this plan.

##### B. Qualified Contractors

For a list of qualified contractors see Appendix V Agency Directories and Contacts.

##### C. Facility Support Teams (Under development)

##### D. Equipment Resource List

Equipment resource lists for local, state, and federal governments, facilities, and contractors are provided in Appendix I.

#### V. PROTECTION STRATEGIES

To protect and prevent further damage to sensitive areas in a spill incident, protection strategies and countermeasures should be utilized. In the Southwest VA/WV sub-area, the primary types of sensitive areas are inland waterways and streams, fisheries, endangered plants, and drinking water intakes. General protection strategies include diversion booms along the sensitive areas to minimize impacts. Removal of the spilled material can be performed if these actions disrupt sediments and sorbent pads can be used to soak up spilled materials. Drinking water intakes are protected with diversion booms to deflect spilled product away from the intake.

##### A. Pre-Designated Boom Locations

Listed in the table below are pre-designated boom locations for each of the counties located in the VA & WV sub-area. The boom locations chosen were selected based on likely areas impacted by a spill, sensitive areas to be protected, and accessibility. However, other locations may be more appropriate, based on spill location and impact. The decisions where to place boom will be made at the scene by the lead agency in coordination with other agencies of the Unified Command.

## B. Water Intakes

Water intakes for the Southwestern Virginia, Southern West Virginia region are listed alphabetically by county in Appendix II. Other water intakes are also listed in the sensitive area table.

## C. Downstream Notifications

The contact person for downstream notifications for water intakes are listed in Appendix V. Other downstream notifications will be dependent on the spill location.

# VI. INTEGRATION WITH OTHER PLANS

This sub-area plan will relate to all other emergency response plans used by federal, state, and local agencies, as well as facilities. It is not necessary to duplicate all of this information in this plan, but it is important to note other regulations and plans which may apply to a spill of oil or hazardous substance. See appendix IV for other state and local plans.

## A. State-Required Plans

1. Preparedness, Prevention, and Contingency Plan (PPC)
2. Spill Prevention Control and Countermeasure Plan
3. State Regulations

## B. County Emergency Response Plans

# VII. DRILL SCHEDULES

A PREP drill is scheduled for \_\_\_\_\_ to exercise this sub-area plan. This will be a \_\_\_\_\_-led drill, sponsored by \_\_\_\_\_.

Other drills to be included in this plan are those identified in the Facility Response Plans and in the County Emergency Response Plans
